Summary

Informatics Engineering graduate with a strong foundation in software development, data analysis, and programming. Experienced in web application development through internships, and accustomed to working both independently and in team environments within Agile settings. Highly motivated to learn, solve technical challenges, and implement innovative technology solutions for real-world problems.

Education

Politeknik Negeri Bandung (2022 - 2026)
Bachelor of Applied Science in Informatics Engineering | GPA: 3.36 / 4.00

Work Experience

Software / Frontend Developer (Internship) at Kabayan Group (June - October, 2025)

- Developed user interfaces for internal web applications using Vue.js, JavaScript, and TypeScript.
- Designed UI prototypes and implemented them into functional web interfaces.
- Identified, analyzed, and resolved various bugs and technical issues within internal applications.
- Collaborated actively with Project Managers, Technical Leaders, and Backend teams in an Agile environment using Git workflow (branching, merging, pull request).

Projects

Data Analyst / Text Mining Researcher — Helpdesk Ticket Taxonomy Analysis (Undergraduate Thesis) (2026)

- Analyzed and constructed an automated IT ticket taxonomy using Recursive Spherical K-Means clustering and IndoSBERT, eliminating category overlaps across 1,639 ticket records through 486 test scenarios adhering to MECE principles.

Full Stack Developer — Enterprise Final Project Management System (2025)

- Developed the Seminar & Defense Planning and Execution module by designing database schemas (ERD) through to interface integration using Laravel and MySQL, streamlining and validating academic administration workflows in an enterprise system.

AI & Machine Learning Developer — Digital Image Deepfake Detection System (2024)

- Built a photo authenticity verification system by training Deep Learning models (CNN) on digital image datasets and integrated the model into a Python-based web app (Streamlit) for automated image manipulation detection.

Skills

Software Development: Full-Stack, Frontend, Backend, QA, Database, UI/UX Design.

Languages & Tools: JavaScript, TypeScript, PHP, Python, Java, Vue.js, Laravel, React, Spring Boot, MySQL.

Methodologies: Agile / Scrum, Git Workflow, SDLC.

Business Analysis: System Analysis, Business Process Mapping, Data Modeling, Enterprise Information Systems.

Certifications & Activities

- **ArutalaLab Certification Program:** Arutala Junior Back End Developer using Spring Boot (2026).
- **TOEIC Official Listening & Reading:** Total score 695 (2026).
- **RevoU Fundamental Course:** Intro to Software Engineering (2023).
- **Himpunan Mahasiswa Komputer (HIMAKOM) Polban:** Active member (2022-2024).
